

Problem A

Tricky Print

Time limit: 1s
Memory Limit: 8MB

Congratulations! You have learned C/C++ for more than 2 weeks. Now, let us try what you have learned during those 2 weeks. You will be given a string (series of character / array of char), you are going to output the C/C++ printf style syntax to output the string given.

Input

The first line is the string described above. The length of the given string is no less than 1 character and no more than 1000 characters.

Output

You need to output the printf style syntax for a program to output the given string. Please look below for the output format. **REMEMBER!** If you output unnecessary character(s), the system will give you “Wrong Answer” instead of “Correct”.

1st Sample Input
I Love Algorithm
Output for 1st Sample Input
<pre>printf("%s\n", "I Love Algorithm");</pre>

2nd Sample Input
We learn how to code in Algorithm class.
Output for 2nd Sample Input
<pre>printf("%s\n", "We learn how to code in Algorithm class.");</pre>

Note: Always print a newline (\n) at the end of the answer.
